WELCOME! LOGISTICS AGV / AMR WEBINAR

- Presented by VARTA: Friday May 22nd 2020 at 1:30pm CET
- We will begin in a few moments. We encourage you to use a separate phone to dial-in for the audio, especially in case any audio issues are experienced and use your computer for the presentation material only.
- Participants are automatically muted but may ask questions via the control panel. You can also chat via the control panel if you have an issue.
- We will handle any questions at the end but please feel free to submit questions at any time via your webinar control panel

WELCOME! LOGISTICS AGV / AMR WEBINAR

Logistics Robotics: An Overview

- What factors are driving this developing market?
 - Cost savings for repetitive tasks (i.e. labour)
 - Improved accuracy
 - Data-driven improvements
- Which applications are emerging?
 - A brief roundup of some of the solutions in the market now
- The Battery Challenge
 - Custom vs Standard
 - Energy Demands, Environment, Voltage
- The Charging Challenge
 - Mobile Robots all the same, or some need longer run-times?

Logistics Robotics: Development Factors

Cost savings

- Reduced labour cost
- 24/7 or extended working without failure
- Faster in many cases

Accuracy

 Computer-controlled warehousing allows 100% picking accuracy.

Data

 Customer data combined with warehouse data means more efficient storage (frequency rules)

Logistics Robotics: Applications

- **AGV Automated Guided Vehicles**
- **AMR Autonomous Mobile Robot**
- **ROV Remote Operated Vehicles**

These may all come in different formats – for towing, with forks, platforms, pallet shuttles etc.

Logistics Battery Challenge: A Few Questions

- What type of Mobile Robotics?
 - Large, Medium, or Small?
 - Usage profile?
- Motor Voltage Requirements?
 - Higher is more efficient, since motor currents are lower.
- How often is it Charged?
 - During operation? (During the day?)
 - Will Battery be replaced with a full one or charged briefly?
 - Overnight only?
- Capacity needs fixed or expandable?
 - Mobile robots all the same, or some need longer run-times?

What Type of Mobile Robotics?

Large:

Traditional Fork-Lifts, Tuggers, & Cleaning Machines

- > 24V, 36V, 48V, +++
- 200 to 2000 Ah
- Majority Lead-Acid
- Battery easily removed
- Flexible usage

Medium:

Platforms, Goods-to-Person, & Robots on Rails (AS/RS)

- > 24V, 36V, 48V
- 10 to 100Ah
- Mostly Li-Ion
- Battery embedded
- Dedicated usage profile

Small:

Small Goods-to-Person, Pick Assist, & Shelf to Shipping

- > 12V, 24V
- 5 to 50Ah
- Majority Li-Ion, Some Lead
- Embedded or removable
- Variety of usage models

What Type of Mobile Robotics?

		<u> </u>

Traditional Fork-Lifts, Tuggers, & Cleaning Machines Platforms, Goods-to-Person, & Robots on Rails (AS/RS) Small Goods-to-Person, Pick Assist, & Shelf to Shipping

Custom Battery Solutions

Standard Battery Solutions

System Solution (Battery, Charger, Accessories)

- 24V, 36V, 48V, +++
- 200 to 2000 Ah
- Majority Lead-Acid
- Battery easily removed
- Flexible usage

- 24V, 36V, 48V
- 10 to 100Ah
- Mostly Li-Ion
- Battery embedded
- Dedicated usage profile

- 12V, 24V
- 5 to 50Ah
- Majority Li-Ion, Some Lead
- Embedded or removable
- Variety of usage models

Motor Voltage Requirements

- Higher is Better for Motors
 - Higher Voltage Motors are More Efficient
 - Lower Operating Currents
 - Lower Operating Temperatures (Why? Power & Heat = I2R)

But 'stacking' Batteries risks imbalance. And will the Battery be too BIG?

- Fixed Voltage Systems avoid Battery imbalance (it's handled in the design)
- Li-lon up to 60V has low weight

Bigger within limits: 48V Nominal is highest without added handling concerns

- "48V" is typically 50-52V nominal and up to 59V for Charging
- Batteries >60V have additional safety handling precautions

Charging Considerations

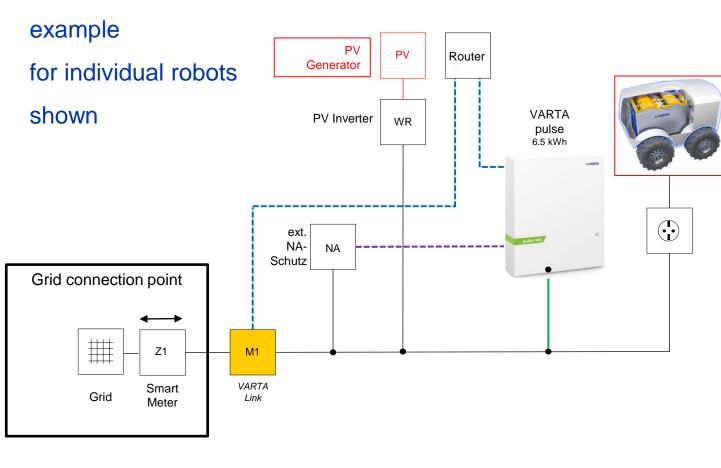

- Fast Charge Options: Some Lithium Battery chemistries like it, others do not!
- How often is it Charged?
 - During operation? (During the day?)
 - If Charging during Operating time then "usage up-time" is decreased
 - Will Battery be replaced with a full one or charged briefly?
 - "Opportunity" charging during breaks vs. Battery "swap-out"
 - Overnight only?
 - Are there enough Chargers? Added cost if need 1:1 Charger to Robot
- Wireless Charging: A nice option, but may require a larger charger due to losses.
- Regenerative Charging: Can the Mobile Robot put energy back to the Battery?

Energy Buffers and Solar Powered Charging Stations

Charging buffer

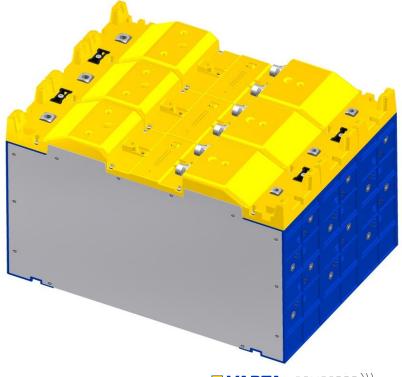

Capacity Needs

- Capacity needs fixed or expandable?
 - All the same, or a mixed fleet with some need longer run-times?
 - Ability to easily add capacity: "Parallel-ing" same voltage Batteries

Summary: Factors in Battery Selection

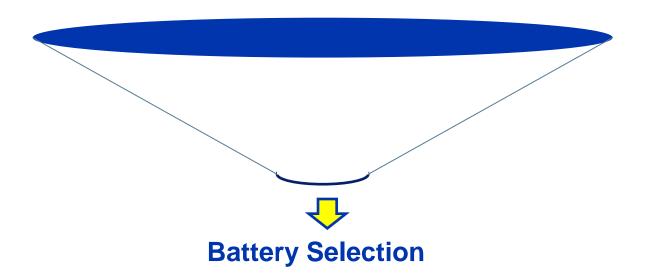

What type of Mobile Robotics?
Small – Medium – Large

Motor Voltage Requirements? 12V, 24V, 36V, 48V

How and where is it Charged? Charge capability

Capacity needs – fixed or expandable? Single or Expandable

Application Specific Battery range by VARTA

MODULAR

STANDALONE

	Easy Block	Easy Blade
12 V	-	-
24 V	22.8 Ah	64 Ah
36 V	-	-
48 V	11.4 Ah	32 Ah

Connect up to 25 in Parallel No Master BMS Needed

Easy Stack	Easy Slice	
161 Ah	80.5 Ah	
80 Ah	40 Ah	
47 Ah	23.5 Ah	
40 Ah	20 Ah	

Easily Removeable for Swappable Battery Options

Shared Features of EasyBlock & EasyBlade

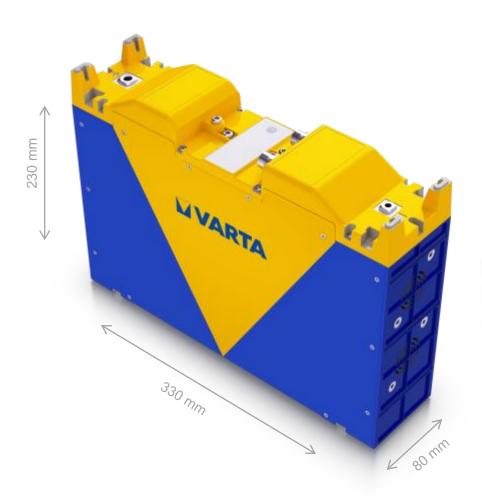

- Modular design for parallel connection up to 25 modules
- Fast charging to 80% within 1 hour, fully charged in <3 hours</p>
- Allows Re-generative Charging
- Automatic Master-Slave Identification: One Battery controls the whole system
- Lightweight, compact modular designs with stacking and locking features for robust mechanical horizontal and vertical stacking
- Zero maintenance or service requirements from the user
- Balanced energy density, power and lifetime performance.
- Integrated communications CAN Bus (CANopen)
- Multi-level safety integrated into each pack
- Comprehensive design-in resources

VARTA Easy Blade Modular

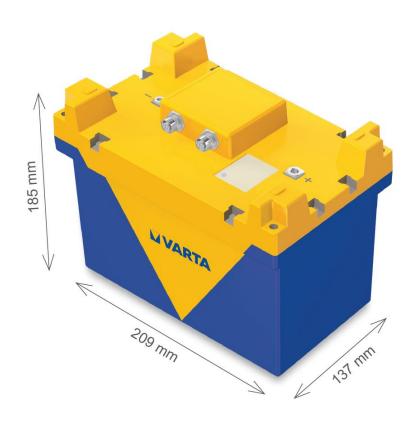

- ► High Energy Li-Ion Technology
- Available in 24V and 48V versions
- ► Active Cooling for improved cycle life performance
- Zero Maintenance during life cycle
- ► Up to 64Ah per module (24V)
- ▶ 1,000 cycles to 80%
- ► UN38.3 & IEC-62133-2 Certifications
- ► Connect up to 25 modules in parallel for more than 41kWh total system energy!

VARTA Easy Block Modular

- ► Long Life Li-Ion Technology
- Available in 24V and 48V versions
- ▶ 4,000 cycles to 80%
- ► Zero Maintenance during life cycle
- ► Up to 22.8Ah per module (24V)
- Connect up to 25 modules in parallel for more than 14kWh total system energy!

VARTA Easy Stack Standalone

- > 2kWh High Energy Li-Ion Technology
- ► Available in 12V, 24V, 36V, and 48V options
- ► LED State of Charge Indicator
- Zero Maintenance during life cycle
- ► Up to 161Ah per module
- ▶ 1,000 cycles to 80%
- ► Easy Exchange with standard connector and lifting/carrying handle

VARTA Easy Slice Standalone

- > 1kWh High Energy Li-Ion Technology
- ► Available in 12V, 24V, 36V, and 48V options
- ► LED State of Charge Indicator
- **▶** Zero Maintenance during life cycle
- ► Up to 80.5 Ah per module
- ▶ 1,000 cycles to 80%
- ► Easy Exchange with standard connector and lifting/carrying handle

Design-In Resources

- Datasheets for quick reference and product selection
- Technical Handbook containing detailed info and set-up guidance
